BLOVAC™

efficient and safe air products

**HIGH PERFORMANCE
INDUSTRIAL MULTI-
PURPOSE BLOW &
VACUUM GUN.**

AUSTRALIAN
MADE.

BV11

****Comes complete with three suction nozzles.***

TWO IN ONE CLEANING GUN

Whenever high powered industrial vacuum cleaning or precise air pressure cleaning is required. The BV11 connects directly to your air line and can be used for a wide range of industrial clean-up jobs, including:

ON VACUUM MODE

Metal fillings from around machines. Ceramic dust. Dust from around equipment such as computers and electrical machinery, lint and thread from industrial sewing machines, sawdust, food crumbs and spilt powders. Fluids and textiles from all working machinery. The classic user for the BV11 would be food processing manufacturers for the removal of coffee, tea, sugar, etc.

ON BLOWER MODE

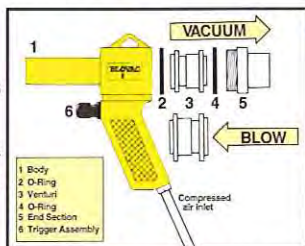

The BV11 produces a much higher velocity than the BV22. The BV11 is an excellent tool to be used for blow cleaning machine tools such as lathes, drills, milling machines, power saws, etc. The BV11 can also be used to provide cooling for a number of industrial and manufacturing processes. Also as an aid to combustion.

SIMPLE SAFE AND INCREDIBLY EFFICIENT

BLOVAC use two air flow principles, Venturi and Vortex. Compressed air entering through the handle is condensed and fire through a number of venturi holes. These holes are angled in such a way as to create a vortex principle giving the BV11 some 15 inches of vacuum, far greater than the BV22 at 4 inches. Due to the angle of the venturi jets, air is exhausted in a spiral form enabling material to be precisely conveyed over long distances.

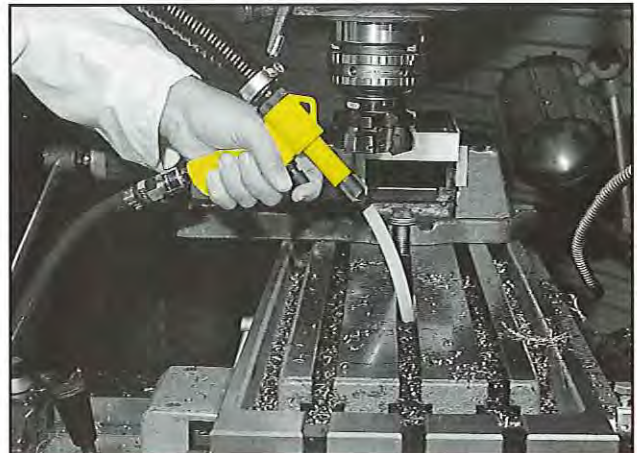

On the blow mode the BV11 develops a concentrated air blast while using 17.65 cfm at 101.5 psi with an output of 123.55 cfm.

The BV11 has available a range of quality accessories such as 3 suction or blow nozzles (being 3mm,6mm & 10mm bore sizes); dust bag and hose clamps: and a duct hose for conveying materials from one place to another.

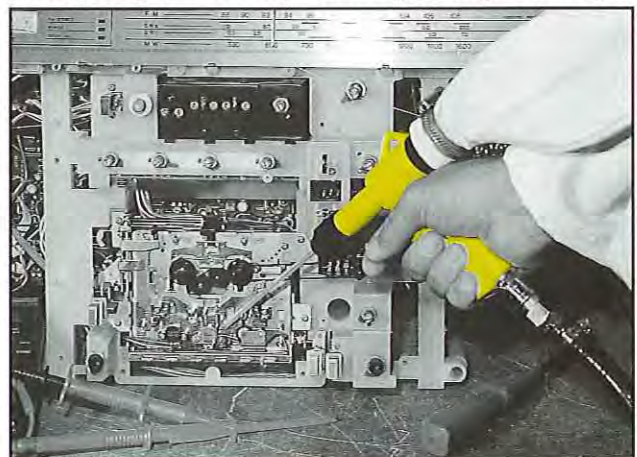

Caution: do not operate on Suction Mode without conveying hose or dust bag fitted (5).

BV11

* Vacuuming up metal chips from engineering machinery.

* Vacuum cleaning dust off electrical equipment.

ACCESSORIES

BV11-1 DUST BAG

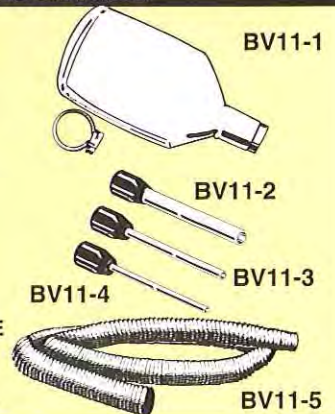

(320 X 160mm), also includes hose clamp.

BV11-2 10mm NOZZLE
(150 x 10mm) fits directly onto gun.

BV11-3 6mm NOZZLE
(150 x 6mm) also fits directly onto gun.

BV11-4 3mm NOZZLE
(150 x 3mm) to fit on the end of the gun, for hard to reach places.

BV11-5 CONVEYING HOSE
25mm (1") heavy duty smooth bore hose. Resistant to petrol and oils.
